- 8.4.1: 图8-10是一个简单的矩阵乘法程序。
- 1) 假设矩阵的元素是需要8个字节的数值,而且矩阵按行存放。把程序翻译成为我们在本节中一直使用的那种三地址语句
- 2) 为1) 中得到的代码构造流图
- 3) 找出在2) 中得到的流图的循环

```
for (i=0; i<n; i++)
  for (j=0; j<n; j++)
      c[i][j] = 0.0;
for (i=0; i<n; i++)
  for (j=0; j<n; j++)
      for (k=0; k<n; k++)
      c[i][j] = c[i][j] + a[i][k]*b[k][j];</pre>
```

c[i][j] = c[i][j] + a[i][k]*b[k][j];
